

Valve bags filling

Big-Bags filling

FROM LOOSE PRODUCT TO THE BAG

Years of experience in creating bagging applications have allowed us to acquire the knowledge necessary for supplying complete turnkey systems. Expertise covers a vast series of devices: From product mixing systems and scale feeding silos to automatic feeding systems for empty bags as well as bagging mouths.

A COMMON DESIGN

The advantages of designing the entire system

with an underlying concept are countless: the standardized coding of spare parts, the use of the same components, and a common design process regarding functionality and layout.

CONTROLLED PRECISION

The systems are equipped with a remote control system that allows our technicians to act on programs and logic errors and that allows the user to receive remote production reports and a history of line operation.
